Subject Index

Canadian Journal of Soil Science, Volume 87, 2007

Acid phosphatase
  soil biological properties in potato management systems, 399
Agri-environmental indicator
  development of a Canadian agricultural N budget model, 153
Agroecosystem
  wildlife habitat on Canadian farmland, 225
Albeluvisol
  quantifying of soil volumes using image analysis, 51
Allelochemistry
  chipping residues and aspen regeneration, 361
Ammonia
  ammonia emissions and probable field working days, 301
  ammonia emissions from beef cattle manure, 345
  lignite-coal extract affects manure nutrient composition, 281
Ammonia volatilization
  ammonia volatilization from manure, 469
  compost co-application affects the fate of urea-N, 485
Ammonium sulphate
  sensitivity analysis – ammonia emissions, 129
Arctic and subartic
  soil organic carbon in northern Canada, 259

Barrier, physical
  chipping residues and aspen regeneration, 361
Biodiversity
  wildlife habitat on Canadian farmland, 225
Biomass,
  microbial biomass and respiration in Newfoundland boreal forests, 455
  soil biological properties in potato management systems, 399
Biosolid
  influence of biosolids on P sorption, 511
Boreal forest
  response of soil N and C transformations to soil preparation, 251
Bulk density
  coarse fragment content on soil physical properties, 565

Cadmium
  partition coefficients for trace elements, 189
Campbell model
  quantifying C sequestration in minimum tillage, 235
  quantifying C sequestration in semiarid prairie, 23
Canadian Intersite Decomposition Experiment
  modeling mass and nitrogen, 413
Carbon
  carbon storage over 20 yr, 93
  microbial biomass and respiration in Newfoundland boreal forests, 455
  quantifying C sequestration in semiarid prairie, 23
  soil biological properties in potato management systems, 399
  straw removal increases light fraction, 113
Carbon dioxide
  temperature effects soil CH_4, 11
Carbon, mineralizable organic
  mineralizability of organic carbon, 495
Carbon, organic
  compost co-application affects the fate of urea-N, 485
  soil organic carbon in northern Canada, 259
  upslope length improves spatial estimation of soil organic carbon content, 291
  variability of soil organic carbon storage, 433
Carbon sequestration
  carbon storage over 20 yr, 93
  quantifying C sequestration in minimum tillage, 235
  quantifying C sequestration in semiarid prairie, 23
  variability of soil organic carbon storage, 433
Carbon, soil
  changes in soil quality, 383
Cattle (feedlot)
  lignite-coal extract affects manure nutrient composition, 281
Census of agriculture
  development of a Canadian agricultural N budget model, 153
  indicator of risk of water contamination by nitrate-N, 179
Century model
  quantifying C sequestration in minimum tillage, 235
  quantifying C sequestration in semiarid prairie, 23
Classification, soil
  determination of leaching potential, 541
Clear-cut
  response of soil N and C transfor mations to soil preparation, 251
Climate
  modeling mass and nitrogen, 413
Coarse woody debris
  carbon storage over 20 yr, 93
Coefficient of variation
  variability of soil organic carbon storage, 433
Cokriging
  upslope length improves spatial estimation of soil organic carbon content, 291
Collembola
  soil biological properties in potato management systems, 399
Compost
  ammonia emissions from beef cattle manure, 345
  nitrogen dynamics of composted manure, 43
Compost amendment
  compost and soil water retention, 535
Computed tomography
  2D vs. 3D thresholding of X-ray CT imagery, 405
Conducting areas
  preferential transport of *Escherichia coli*, 61
Conductivity
  coarse fragment content on soil physical properties, 565
Contamination
  indicator of risk of water contamination by nitrate-N, 179
Conventional tillage
  root heat stress in wheat, 3

Copper
partition coefficients for trace elements, 189
Cropping frequency
quantifying C sequestration in semiarid prairie, 23
Cropping system
P loadings response to best agricultural management practice, 329

Database
soil organic carbon in northern Canada, 259
DDT
DDT in soil at a sand dune-marsh environment, 315
Debris, coarse woody
carbon storage over 20 yr, 93
Degradation rates
DDT in soil at a sand dune-marsh environment, 315
Denitrification
microbially habitable pores and denitrification, 269
denitrification and composition model direct emissions of nitrous oxide and related uncertainties, 141
Deposition
mineralizability of organic carbon, 495
Drainage, artificial
quantifying of soil volumes using image analysis, 51
Drought
soil water regimes of forages under drought, 523
Dryland salinity
risk of soil salinization, 213

Earthworm
changes in soil quality, 383
Effet nutritionnel de l'azote
effets nutritionnels et non nutritionnes liés aux légumineuses, 455
Electrical conductivity
determination of leaching potential, 541
Emission
lignite-coal extract affects manure nutrient composition, 281
Emission factor
ammonia emissions and probable field working days, 301
Environmental threshold
soil test phosphorus in manured and non-manured soils, 73
Ergosterol
microbial biomass and respiration in Newfoundland boreal forests, 455
Erosion
coarse fragment content on soil physical properties, 565
mineralizability of organic carbon, 495
Erosion, water
changes in soil quality, 383
Escherichia coli
preferential transport of *Escherichia coli*, 61

Feedlot
ammonia emissions from beef cattle manure, 345
Fertilizer, mineral
soil properties, spatial variation and microbial dynamics, 479
Fertilizer N use efficiency
controlled release urea for winter wheat, 85
Field capacity
soil water regimes of forages under drought, 523
Field variability
soil properties, spatial variation and microbial dynamics, 479
Field working day
ammonia emissions and probable field working days, 301
Flux measurements
ammonia volatilization from manure, 469
Forage
soil water regimes of forages under drought, 523
Forest, boreal
microbial biomass and respiration in Newfoundland boreal forests, 455
response of soil N and C transformations to soil preparation, 251
Forest floor
carbon storage over 20 yr, 93
Forest litterbags
modeling mass and nitrogen, 413
Fraser Valley
sensitivity analysis – ammonia emissions, 129
Fumigation-extraction
microbial biomass and respiration in Newfoundland boreal forests, 455
Fungal biomass
microbial biomass and respiration in Newfoundland boreal forests, 455

Geostatics
assessing spatial distribution and joint uncertainty of TPH-fractions, 551
upslope length improves spatial estimation of soil organic carbon content, 291
Golf course management
core aeration of sand-based putting greens, 103
Grazing, rotational
soil water regimes of forages under drought, 523
Greenhouse gas
lignite-coal extract affects manure nutrient composition, 281

Habitat, wildlife
wildlife habitat on Canadian farmland, 225
Habitable pore space
microbially habitable pores and denitrification, 269
Harvest slash
microbial biomass and respiration in Newfoundland boreal forests, 455
Heat stress
root heat stress in wheat, 3
History
Canadian Journal of Soil Science – 50th Anniversary, 353
Horizon
determination of leaching potential, 541
Hydraulic conductivity
changes in soil quality, 383

Incubation, in situ
a comparison of net N mineralization methods, 39
Image analysis
quantifying of soil volumes using image analysis, 51
Indicator
wildlife habitat on Canadian farmland, 225
Integrated pest management
soil biological properties in potato management systems, 399
Introductory C balance model
quantifying C sequestration in minimum tillage, 235
Intergovernmental Panel on Climate Change
direct emissions of nitrous oxide and related uncertainties, 141
Irrigation
ammonia emissions from beef cattle manure, 345

Kriging
assessing spatial distribution and joint uncertainty of TPH-fractions, 551
upslope length improves spatial estimation of soil organic carbon content, 291

Land use
risk of soil salinization, 213
Land use change
wildlife habitat on Canadian farmland, 225
Landscape
determination of leaching potential, 541
Landscape nitrogen model
development of a Canadian agricultural N budget model, 153
Landscape processes
upslope length improves spatial estimation of soil organic carbon content, 291
Landscapes, soil, of Canada
development of a Canadian agricultural N budget model, 153
indicator of risk of water contamination by nitrate-N, 179
Leachate
chipping residues and aspen regeneration, 361
LEACHD
pesticide fate model automation, 203
Leaching
determination of leaching potential, 541
LEACHM
pesticide fate model automation, 203
simulating plant-available N, 369
Lead
partition coefficients for trace elements, 189
Legume green manure
quantifying C sequestration in minimum tillage, 235
Light fraction
straw removal increases light fraction, 113
Litter type
modeling mass and nitrogen, 413
Livestock
ammonia emissions and probable field working days, 301
sensitivity analysis – ammonia emissions, 129

MACRO
pesticide fate model automation, 203
Manure
ammonia emissions from beef cattle manure, 345
sensitivity analysis – ammonia emissions, 129
soil test phosphorus in manured and non-manured soils, 73
Manure, beef
nitrogen dynamics of composted manure, 43
Manure, legume green
quantifying C sequestration in minimum tillage, 235
Manure, swine
ammonia volatilization from manure, 469
Manured soil
soil test phosphorus in manured and non-manured soils, 73
Marshy soil
DDT in soil at a sand dune-marsh environment, 315
Membrane inlet mass spectrometry
temperature effects soil CH_4, 11
Methane
temperature effects soil CH_4, 11
Microbial biomass
soil properties, spatial variation and microbial dynamics, 479
Micrometeorology
ammonia volatilization from manure, 469
Mineral fertilizer
soil properties, spatial variation and microbial dynamics, 479
Mineralizable organic carbon
mineralizability of organic carbon, 495
Mineralization
straw removal increases light fraction, 113
Mite
soil biological properties in potato management systems, 399
Modelling
ammonia emissions and probable field working days, 301
P loadings response to best agricultural management practice, 329
Moisture, soil
coarse fragment content on soil physical properties, 565
Monte Carlo Simulation
direct emissions of nitrous oxide and related uncertainties, 141

National Agri-Environmenatl Health Analysis and Reporting Program
sensitivity analysis – ammonia emissions, 129
Nickel
partition coefficients for trace elements, 189
Nitrate
effets nutritionnels et non nutritionnes liés aux légumineuses, 455
indicator of risk of water contamination by nitrate-N, 179
residual soil N indicator for agricultural land in Canada, 167
Nitrogen
microbial biomass and respiration in Newfoundland boreal forests, 455
N, P, and KC1 management for oat, 459
straw removal increases light fraction, 113
Nitrogen balance
residual soil N indicator for agricultural land in Canada, 167
Nitrogen concentration
modeling mass and nitrogen, 413
Nitrogen dynamics
compost co-application affects the fate of urea-N, 485
Nitrogen fertilizer use efficiency
controlled release urea for winter wheat, 85
Nitrogen indicator
residual soil N indicator for agricultural land in Canada, 167
Nitrogen mineralization
a comparison of net N mineralization methods, 39
nitrogen dynamics of composted manure, 43
Nitrogen, plant-available
nitrogen dynamics of composted manure, 43
simulating plant available N, 369
Nitrogen-15 recovery
compost co-application affects the fate of urea-N, 485
Nitrogen, soil mineral
simulating plant available N, 369
Nitrogen transformation
response of soil N and C transformations to soil preparation, 251
Nitrous oxide
direct emissions of nitrous oxide and related uncertainties, 141
No-till
root heat stress in wheat, 3
Non-manured soils
soil test phosphorus in manured and non-manured soils, 73

Northern Canada
soil organic carbon in northern Canada, 259

Oat
N, P, and KC1 management for oat, 459
Odour
ammonia emissions and probable field working days, 301
Organic amendment
soil properties, spatial variation and microbial dynamics, 479
Organic matter decomposition
modeling mass and nitrogen, 413
Orge
effets nutritionnels et non nutritionnes liés aux légumineuses, 455

Pedogenesis quantification
quantifying of soil volumes using image analysis, 51
Penetration resistance
core aeration of sand-based putting greens, 103
Permanent cover
risk of soil salinization, 213
Persistence
DDT in soil at a sand dune-marsh environment, 315
Pesticide
pesticide fate model automation, 203
Petroleum hydrocarbon contamination
assessing spatial distribution and joint uncertainty of TPH-fractions, 551
Phosphorus
N, P, and KC1 management for oat, 459
P loadings response to best agricultural management practice, 329
soil test phosphorus in manured and non-manured soils, 73
Phosphorus, labile, non-labile
influence of biosolids on P sorption, 511
Phosphorus sorption isotherm
influence of biosolids on P sorption, 511
Phosphorus saturation, degree of
influence of biosolids on P sorption, 511
Physical and biochemical properties of soil
compost and soil water retention, 535
Plant-available nitrogen
nitrogen dynamics of composted manure, 43
simulating plant available N, 369
$PM_{2.5}$
sensitivity analysis – ammonia emissions, 129
Pois sec
effets nutritionnels et non nutritionnes liés aux légumineuses, 455
Populus tremuloides
chipping residues and aspen regeneration, 361
Potassium chloride
N, P, and KC1 management for oat, 459
Potato cropping
coarse fragment content on soil physical properties, 565
Potato rotation
compost and soil water retention, 535
Potato, soil management for
soil biological properties in potato management systems, 399
Precipitation
a comparison of net N mineralization methods, 39
Preferential flow
preferential transport of *Escherichia coli*, 61
PRZM
pesticide fate model automation, 203

Quality, soil
changes in soil quality, 383

Regeneration
chipping residues and aspen regeneration, 361
Regrassing
quantifying C sequestration in minimum tillage, 235
Representative elementary volume
quantifying of soil volumes using image analysis, 51
Residual nitrogen
residual soil N indicator for agricultural land in Canada, 167
Respiration, soil
soil properties, spatial variation and microbial dynamics, 479
Risk indicator
pesticide fate model automation, 203
Risk of soil salinization
risk of soil salinization, 213
Root
root heat stress in wheat, 3
Rotational grazing
soil water regimes of forages under drought, 523

Salinity, dryland
risk of soil salinization, 213
Sampling design
variability of soil organic carbon storage, 433
Sandy soil
DDT in soil at a sand dune-marsh environment, 315
Scientific writing
Canadian Journal of Soil Science – 50th Anniversary, 353
Sediment
P loadings response to best agricultural management practice, 329
Segmentation
2D vs. 3D thresholding of X-ray CT imagery, 405
Sequential indicator simulation
assessing spatial distribution and joint uncertainty of TPH-fractions, 551
Site preparation
response of soil N and C transformations to soil preparation, 251
Slow release
controlled release urea for winter wheat, 85
Soil and water assessment tool
P loadings response to best agricultural management practice, 329
Soil landscapes of Canada
development of a Canadian agricultural N budget model, 153
indicator of risk of water contamination by nitrate-N, 179
Soil science research
Canadian Journal of Soil Science – 50th Anniversary, 353
Soil solution
response of soil N and C transformations to soil preparation, 251
Soya
effets nutritionnels et non nutritionnes liés aux légumineuses, 455
Spatial dependence
soil properties, spatial variation and microbial dynamics, 479

Spatial variability
mineralizability of organic carbon, 495
variability of soil organic carbon storage, 433
Static chambers
ammonia volatilization from manure, 469
Statistical power
variability of soil organic carbon storage, 433
Straw management
straw removal increases light fraction, 113
Stress, heat
root heat stress in wheat, 3
Structure, soil
microbially habitable pores and denitrification, 269
Sulphate
determination of leaching potential, 541
Summerfallow
risk of soil salinization, 213

Temperature
coarse fragment content on soil physical properties, 565
root heat stress in wheat, 3
temperature effects soil CH_4, 11
Threshold
2D vs. 3D thresholding of X-ray CT imagery, 405
Tillage
ammonia emissions from beef cattle manure, 345
compost and soil water retention, 535
Tillage, conventional
root heat stress in wheat, 3
Tillage erosion
coarse fragment content on soil physical properties, 565
Trèfle rouge
effets nutritionnels et non nutritionnes liés aux légumineuses, 455
Turf management
core aeration of sand-based putting greens, 103

Uncertainty analysis
assessing spatial distribution and joint uncertainty of TPH-fractions, 551
direct emissions of nitrous oxide and related uncertainties, 141
Uranium
partition coefficients for trace elements, 189
Urea, manure properties
controlled release urea for winter wheat, 85
lignite-coal extract affects manure nutrient composition, 281
Urease activity
compost co-application affects the fate of urea-N, 485

Variable landscapes
simulating plant available N, 369
Vertisol
preferential transport of *Escherichia coli*, 61
Volatile faty acid content
lignite-coal extract affects manure nutrient composition, 281

Water infiltration
core aeration of sand-based putting greens, 103
Water quality
indicator of risk of water contamination by nitrate-N, 179
Water, soil
compost and soil water retention, 535
soil water regimes of forages under drought, 523
Wetness index
upslope length improves spatial estimation of soil organic carbon content, 291
Wetting state
preferential transport of *Escherichia coli*, 61
Wheat
root heat stress in wheat, 3
Wheat, winter
controlled release urea for winter wheat, 85
Wildlife habitat
wildlife habitat on Canadian farmland, 225
Wilting point
soil water regimes of forages under drought, 523
Wind tunnel
ammonia volatilization from manure, 469
Winter survival
controlled release urea for winter wheat, 85

Zinc
partition coefficients for trace elements, 189
